

There there are still many mysteries as to the origin of our earth  
there should be a  
and the solar system, it is not at all strange that ~~the~~ great diversity of opinion  
as to the origin and condition of the cosmos as a whole. Yet, in this field,  
there may be more unanimity among scientists, as to solar system, many theories  
have been advanced, but at present, there are two which are very widely held,  
and a third which is held by some, particularly among the Soviet scientists.

These theories have all come into existence only since the evidence  
was found about the expanding universe. Naturally differ ~~greatly~~ greatly from  
~~the~~ theories that could have been advanced before. ~~It~~ The first of  
these theories to receive a ~~wide~~ wide publicity was what its opponents come to  
call ~~steady state theory~~. the big-bang theory.
