

Until one who observed it carefully, examined carefully, and thought about ~~in~~ the Bible. it, would feel that he had indeed found a mistake. Now, however, with the invention of the ~~x~~ telescope in this last 400 years... thus we are given knowledge of stars. We see actually the number of stars runs into billions. And the inference of God's statement to Abraham is proven to be absolutely in line with the truth of the universe that God has made.

---

On May 25, 1964 the Newsweek magazine carried a picture of a man,

① on its cover, and above his head there is a great swirling clouds and stars, and the title in large letters, LIFE AND DEATH OF THE UNIVERSE. Further down, it said, astrophysicist, Fred Hoyle. Inside the magazine ~~there~~ was an article telling about the great advances in astronomy made by Fred Hoyle and others in recent days, giving a summary of ... telling something of the tremendous extension in our knowledge of the universe. It tells us about the discovery of the expanding universe, and lists three theories as to how it all began. The impression that one ~~gets~~ gets is that our knowledge has advanced tremendously and the universe is far greater than anyone has ever dreamed of, but science is just about ready to give us a complete answer as to its nature and as to its origin with only three major theories from which to select. In the article in the Newsweek a half page is given to a section called ~~How it all began~~ How it all began: (three theories) It describes first what is called the steady-state theory ~~which was~~ formulated by Thomas Gold, Hermann Bundy, and Fred Hoyle. According to this theory, it is ~~said~~ said that the population of the universe remains unchanged. New galaxies are formed as old ones disappear. Then it mentions what is called the big-bang theory which ~~is~~ <sup>was</sup> it says, /proposed by a Belgian priest, ~~Ab~~ Ab.... Laimetre, in 1927. / There was an explosion of a primitive atom of concentrated matter about 10 billion years ago,
