

Some claimed that this was the land of the Edomites but when Dr. Gluick went in 1940 he found out that this, though in the land of Edom, had no Edomite influence but was all influenced by Palestinian people. We will find that we will always be safe to take what the Bible says and stand on it. Of course we cannot prove everything that is in the Bible but the places that can be proved or have been proved have been found to be just as the Bible said. Mr. H.G. Well's statement was found to be absolutely wrong. Surely we can take the statements of Christ and stand on them--we can know what Christ says is true and accept the things He says about eternal life as just as true and thus be sure of eternal life....prayer.

Record # 8--a personal letter

*Min. 1-7 - blank*

Record #21, beginning with the break--Other problems have been discussed over and over in the past 100 years but the science of archeology is comparatively recent. I have recently written a short ~~summary~~ <sup>article</sup> on it but there are no large books written thereon. Nevertheless the facts are there and the principles are there. The name of the book is "Modern Science and Christian Faith"--True, it deals with other subjects in the Bible--a new version or a revised edition is coming out in the Fall and this might of much help to all of you. Today there are ~~many~~ many Seminaries and colleges that have taken over the higher critical theories. One of the greatest archeologists in the world, though violently disagreed with by some--his father was a Methodist missionary in South America but when he came to the States he accepted all the teachings of higher criticism but when he went to work in the field where he found things that confirmed the Bible he would rejoice but when he would find things that supported the anti-biblical view he remained silent thereon. In all this is was unique from the average archaeologist.

Record # 22--When you come across a teacher that tries to slant just minor pieces of evidence against the Biblical view point etc.--you will almost invariably find that there was a time when these truths were instilled into his life, and he is now afraid that some of the truths will crop up so he does all in his power to slam the Word of God--there seem to be two types of archeologists. One that says the Bible is all wrong and the other that says "The Bible is not wrong yet". It is true that many of these discoveries are made by men which do not believe the Bible. If they are
