

Man was way up there in space, and
He did not find any god. And of course we know now that if just the part of the
space that we can see with our telescope. It is just that part of the space that
it is considered to be as big as this room from the front there to back there.
It is considered to be that portion of the distance that man has been able to
go would not be ... would be less than an inch - eighth of an inch proportion.
We have not begun the exploration of space. We started out with something
toward Mars, the nearest planet, and the other planets and are hundreds of times
as far away from us as Mars. The other suns are million times as
far away from Mars. And the other galaxies are billion times as far away as.
but we started one up toward the Mars... someone is yet to go there, but ...
and man in his petty pride thinks he has conquered the space, thinks that
he is able to control the universe. Because the artificial lights seem to me
to shut out the sun, and shut out the lights of the stars... and because of the new telescope
and the things that he has learned about them, ... about the heavens, but
God has made them, and so as we look at the science, at the facts of science,
if we look at the world as we have learned more and more about it, if we
look at it in a reasonable way, we truly can say that, as the psalmist said, -- did,
the heavens declare the glory of God; and the firmament sheweth -- etheth his
handy work. There is one part of the Bible where this particular matter is
stressed more than almost anywhere else. And that is in the chapter of
Isaiah, from Isaiah 41. If you look at that section from Isaiah 40 on to 56,
you will find a section in which the prophet Isaiah looks forward to the -- 150
years the time when the Israelites would be there in exile, and you look forward
to that time and to them longing to be delivered from the exile, and you look
