

what the facts are. We are not afraid of science. We know that true science and the Bible always fit together.

The more we learn the more we find that there are great mysteries which we do not yet know. A most interesting illustration of this fact is shown in something that has occurred within my own lifetime.

Thirty years ago there was a string of restaurants in the eastern part of the United States, which stated on every menu just how many calories each order of food contained. These menus were so arranged as to make it easy for the person dining to construct for himself a scientific meal, having just the right number of calories, and also the right proportion of proteins, carbohydrates, and so forth.

Today we know that a man could follow those rules most carefully and yet could deteriorate and die because of actual starvation. During the past 40 years the vitamins have been discovered, and thus a whole series of chemical substances have become known to us which were completely undreamed of 40 years ago. Almost infinitesimal amounts of some of these are necessary for the maintenance of life and well-being; if they are taken away we suffer all sorts of bad results, and even death may come in certain cases. The very existence of vitamins was unknown 40 years ago. The science of bio-chemistry has made tremendous strides in recent years, and has shown us how much there is in the universe that we never even thought of before. Today people are so interested in getting the right amount of vitamins that sometimes they even forget that anything else enters into securing a proper diet.

Who knows but that in future years we may discover still other factors, today not even dreamed of, that are equally vital to our life, which we are now getting from our food or in some other way, in accordance with God's provision. Science has only begun to scratch the surface of the vast multitude of substances and principles
