

I2

you just could not understand what happened in the mean time. You must have a revelation from the space

So today even scientists get at least 80 % of their knowledge through revelation from somebody else. Probably a higher school teacher who has not any through acquires knowledge through a revelation from somebody else, /communications of with some other individuals for what they thought of as It is one of the commonest way of getting knowledge, and sure way of getting knowledge, provided that you get the revelation from ~~someone who is an individual who knows, it~~. Sometimes I think that a great many philosophers/somewhat/imaginary ~~is~~ a group of individuals island who met on an /on near the Pacific ocean . There on this Pacific ocean these stand men/who have never crossed that over, have never talked to anyone who went over and these men stood on the top of ...and they looked out on ~~te~~ the ocean , just ~~x~~ as you might look out on the Atlantic here, and they asked the question, is there another continent across the other side of the ocean. So they asked themselves is there a land over there or not, and if so, what sort of a ~~lang-~~ land is it. What kind of language ~~x~~ do the people speak. What kind of animals are there. Do the Rivers run from north to south like the Mississippi, or do they run North and West like the Nile, or do they run from West to East , like the Amazon. What directions do the rivers flow. ..they could ask a thousand questions and they could show the most marvelous ...basic questions and discuss them and , but unless they ~~could~~ could get a revelation , it would be absolutely impossible to have sure knowledge as to what may be on the other side, and when it comes to the question where we came from and what ...the only way that we can get information that would be available to us would be to get a right ~~x~~ relation ...and so ...but ...because
