Well, I will post that. I will not expect anything from you for Wednesday, and I expect you by Thrusday to have the first assignment. And since that really covers two assignments, then, I will make it a little bit longer than a normal assignment, but I won't make it as long as I would make two full

assignments. We expect, ordinarily in this class, as in all/regular undergraduate

classes, about two hours' study for a lesson. Now in the case of people who are having two beginning languages, we will make a little allowance if your work is a little late, sometimes, and in fact, we may shorten some of the assignments in a later part of the semester. But it x very vital to get these two hours of assignments in order to get the foundation.

But in general, for those not taking two beginning languages, we expect ou to do two hours' work for a lesson in this course. Now if you think that the assignment is taking you much more, then you probably misunderstood the assignment. At least do two hours' of it, and I do not xx expect that you put more on it. I may have misspoken the assignment, I may have thought that a certain chapter had less in it than it did, or something, but I do not expect anyone to put more than two hours on an assignment. And there will be no assignment for Wednesday, and so the assignment for Thursday should run you about three hours instead of four.

Well, now, so much then for the moment for xhxxx seeing what we mean by Ch. Hist., which was a logical place to introduce this assignment of the work that we will be doing in the early part of the course. - the work in Acts. Now to mention C, which is the main divisions of ch. hist. And, by the way, while everyone is here, xhxtxxxxxxxx that it is my expectation to meet three times next week, x though I will give assignments only for the regular hours. And also if there are any here who were not here yester- day, and so did not fill out the questionnaire, yesterday, if you will do it the next hour I will appreciate it. In this case, you might come and see me right at the end of class, and I will help you get started on it.

C, then, the main divisions of ch. hist. I think there are two ways in which we could handle ch. hist. One would be to go straight through and
