49:12

And the people who came to China by sea from Europe came to refery to it as a
land of Sin, or land of Chin, and from that the word China has been derived, so that
                                                    our
most scholars believe that the fact that the Western world refers to it China
by a na me that is not used by the Chinese themselves as the land of China which
it is traceable back to where simply the land of Chin before the -na was put on,
                                                    in western, in the
believe that that is derived from Sin.   This area, in the/the extreme western
                                                                n
China which conquered this about 200 B.C. Well, now, you have then whe this name
                                                    IN
came to be applied to China, _____ it is used in the West, about 200 B.C., how
              have   it
could Isaiah could/have/used/about 700 B.C. to refer to China. And there a professor
of Chinese who studied in the University of Pennsylvania I heard some years ago
at the discussion of his seminar make a statement that in the time of Isaiah
              s
the caravan/of China from the West overland would first come into this region of
Sin. And it is very natural to name the whole region by the first part of it
to which _____ come. Just like the Romans who who had a province of Asia, what
                                                    would
we would say, Asia Minor. The Romans call that Asia, and when they/cross over the
_____, they first originally came there, they called the place Asia, the
                        that name
province of Asia, and then eventually it came to be applied to the whole/
continent _____ ‾6 many thousands of miles beyond. And until this day we
call the whole continent by the name of the province that was nearer. Now the
              the
samething today that/French refers to Germany as Allemagne, that and that means
from one of the hundreds of German tribes, one that happened to be right next to
the border of France, and they refer to this tribe as the people over that
region which/ way from it, and then they came to extend it the term to apply it
to the whole area. And so, it would not be at all unnatural for Isaiah to/,
in Isaiah's time for the usage to be to refer to the first section of China
which you come to, and use that to refer to the whole area. Now that we can't
prove to be the case, but we do know that the name China which is mostly called
                                                                call
