

Summary

June 18. I have looked over all the quotations in Toy up to Matthew 21 noting which appeared to me to be fulfilled predictions. Mrs. Layton has looked over the rest of them in Toy's Index and up to Revelation and noted those which appeared to her to be fulfilled predictions. These which she marked are marked on a separate sheet, and I have looked them over and made notations regarding them.

I looked over all the quotations which Toy lists under "Old Testament Passages quoted." From Isaiah, Chapters 40 through 46. I have omitted most of those which are in the book of Revelation since these are simply echoes of phraseology and not designated as quotations. Among the others I have passed over those which were clearly nothing but echoes of phraseology but the rest of them I have listed stating to what they seem to be referring, and naming the most important problems that appear. Also I have made special notations regarding some of them. I looked at all the quotations from Zechariah listed in Toy and made brief notations regarding them.

June 20. Copied the A. V. of the verses which H. G. Mitchell gives as clear cases of rhetorical questions with the interrogative particle omitted, on page 117 of his article in Old Testament and Semitic Studies in Memory of William Rainey Harper, Chicago, 1908, in a few cases I inclosed the references in parenthesis to indicate that it is evidently a scribal error. Outside of these cases of claims there are no actual instances of the omission of the interrogative particle in independent or initial questions. On page 125-126 he arranges these according to the form of the sentence, to show that the order of the words was not in point. His conclusion is that "in direct single or initial questions $\bar{\text{I}}$ is omitted before the article, and sometimes in exclamatory questions for the purpose of indicating more clearly the incredulity, irony, or sarcasm which prompted them, but it can be adequately expressed only by the human voice."

Mitchell remarks however that often in just such cases as this the introductory particle is used.
