

animals. Verse 21, And God created great whales, and every living creature that moveth, which the waters brought forth abundantly, after their kind, and every winged fowl after his kind: . . . and in verse 24, again, And God said, Let the earth bring forth the living creature after his kind, That is very clearly stated there. So, the theory that from one simple ~~of~~ beginning all life developed until we have the complexity today. It ^{is} ~~sharply contradicts~~ ^{ed} ~~with many~~ by many they were reproduced after their time. But of course that leaves the question, what does that mean? , "after his kind?" ~~And a few centuries ago there was a very godly, brilliant Swedish biologist, named Lineas, and Lineas who believed in special creation, who s= very strongly supported the Bible as God's truth, and for that reason, rather looked down upon ~~this~~ this book of Lineas from the University of Chicago. It is, nevertheless, recognized by all that it is ~~the immediate~~ ^{they} Lineas who established the system of classification which is being used ^{in the main} today, in science, and Lineas established a system in which he took the word species which is ^a Latin for kind. He made that the smallest division, and Lineas thought that each species was separate, and a separate creation of God, and that there was no passing over from one to another. ~~Lineas felt that~~ But I don't believe that Lineas was inspired, even though he was a very godly man and ~~a~~ a believer in the scripture, and when Lineas said , "This is a species, and this is a species," I don't think that meant necessarily what Moses meant when he said, "they re-produced after their kind." I don't think we know what he meant by after their kind, but this we are told that there were kind, and so that completely denies any theory that everything ~~is~~ has ~~its~~ developed from one simple beginning ^{the} ~~to~~ all the complexity that we have today, but leaves the possibility that God may have caused ~~all~~ certain things ~~that~~ that were very~~
